Tiling trowel with a hydro sponge for cleaning tiles after grouting - underlay dimensions 270x130mm

A tile trowel with a HYDRO-absorbent sponge from the professional COMENSAL BRAVO line, intended for cleaning tiles after grouting and other works requiring effective cleaning of washable surfaces.

It has a profiled handle, and the porous HYDRO sponge collects the tarnish well without leaving streaks. It is characterized by high absorbency, thanks to which it remains moist for a long time and cleans dirt well. Thanks to the high water absorption and water retention, cleaning the tiles is done without splashing. Pac in the most common size. It is easy to rinse and imprint with the help of glazing rollers and a grid.

A float with a COMENSAL HYDRO-absorbent sponge tested and recommended in the tiling community, designed for effective and comfortable use.

Handle and tabletop

The ergonomic handle with recesses profiled for the fingers fits well in the hand, gives a sense of comfort and "control" over the tool.

Anti-slip rubber bands placed on the sides additionally stabilize the hand.

The plastic part of the trowel (top with a handle) is made of high-quality plastic.

It is aesthetic and resistant to damage.

The plastic is smooth and shiny, refined in detail.

The tabletop was permanently connected to the sponge with glue.

Paca has a handy most popular size. Due to its weight and size, it is easy to maneuver.

Trowel size: 270x130mm

Sponge

Thanks to its porous structure, it thoroughly collects grouting residues from the tiles.

It is HYDROabsorbent. It effectively retains water, making it effective at work. After draining, the water remains in the underlay, it does not leak from the bottom, the tiles are evenly washed with a saturated, highly moist sponge, and the workplace is not

flooded with dirty water.

It is easy to rinse and squeeze excess water with the use of a tile grate and rollers, thus obtaining the expected moisture of the foundation. The grid also restricts access to the sludge collected at the bottom of the bucket. This makes rinsing the sponge effective

The sponge belongs to the polyurethane group. It is soft and resilient to the touch.

Sponge size: 280x140mm

Sponge thickness: 30mm

Complementarity:

Other auctions of the COMENSAL store include original tiling buckets with rollers and a grid, as well as other tools and accessories needed in tiling works, including tiling sponges and various sizes of trowels with primers for various types of tiles and tiling activities (washing, cleaning, blurring the grout cement and epoxy)

After the sponge is used up, it is possible to replace the foundation with a new one. To do this, cut off the used sponge with a knife, get rid of the remnants of the old material left on the trowel and glue the new underlay with waterproof glue - available at other auctions. The adhesive must be suitable for bonding polyurethanes/polyurethane sponges. If in doubt, make a test.

Quality and satisfaction

Working with a trowel with a COMENSAL HYDRO-absorbent primer is satisfying, because the tiles quickly regain their shine, the sponge does not leave stains, and the cleaning process takes place without unnecessary splashing

The tool was made of high-quality raw materials, thanks to which it is resistant to damage, and properly maintained, cleaned and stored, it will be useful for a long time.
