The glass in the cabins has been covered with the innovative Active Cover hydrophobic coating, which repels water molecules from the glass surface and thus definitely reduces the formation of scale. The coating is applied during the production of glass, which guarantees its long durability and reliability.

The covers hide the unsightly assembly parts, adding elegance to the cabins.

The use of dedicated agents means that the surfaces do not deteriorate and remain smooth for a long time, facilitating another cleaning. A specially selected composition removes the most common dirt very effectively. On the other hand, the preparations are delicate for a given type of surface (metal, granite, ceramics and others), without entering into chemical reactions with them. The preparations are biodegradable and thus harmless for the environment. With Deante cleaning products, keeping things in order will be very easy!
