The sink made of steel is resistant to impact, high temperatures up to 250 degrees Celsius and thermal shock. Stainless steel used for the production of sinks consists of 18% chrome, which responsible high chemical strength and 10% nickel, which additionally elasticity. Such a combination results in a pretty, aesthetic and durable color. Stainless steel is simple to clean, repels bacteria from the surface. The antiseptic coating guarantees a high level of hygiene and is easy to clean.

The use of dedicated agents means that the surfaces do not deteriorate and remain smooth for long, facilitating another cleaning. A specially selected composition removes the most common dirt extremely effectively. On the other hand, the preparations are delicate for a given type of surface (metal, granite, ceramics and others), without entering into chemical reactions with them. The preparations are biodegradable and thus safe for the environment. With Deante cleaning products, keeping things in order will be very easy!

In order for the sink to fully meet your expectations, during installation you can decide on which side to put the drainer. If you want to arrange a functional kitchen, the possibility to adapt the sink to individual preferences is very important.
