The sink made of steel is resistant to impact, high temperatures up to 250 degrees Celsius and thermal shock. Stainless steel used for the production of sinks contains 18% chrome, which provides high chemical resistance and 10% nickel, which at the same time flexibility. Such a combination results in a beautiful, elegant and constant color. Stainless steel is simple to clean, repels germs from the surface. The antiseptic coating guarantees a high level of hygiene and is easy to clean.

The use of dedicated agents means that the surfaces do not deteriorate and remain smooth for long, facilitating another cleaning. A specially selected composition removes the most common dirt extremely effectively. On the other hand, the preparations are mild for a given type of surface (metal, granite, ceramics and others), without entering into chemical reactions with them. The preparations are biodegradable and thus harmless for the environment. With Deante cleaning products, keeping things in order will be very easy!
