## Steel sink, 1-bowl

High-strength stainless steel

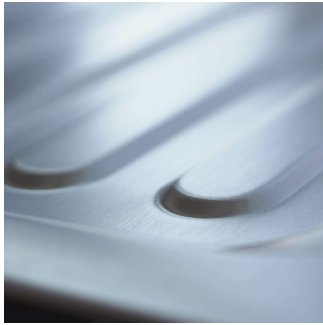

The sink is equipped with fittings with a connection to the dishwasher

Natural antiseptic properties of steel

Dedicated cleaning agent, safe for cleaned surfaces

## High-strength stainless steel

The sink made of steel is resistant to temperatures up to 250 degrees Celsius, thermal shock and impacts. Stainless steel used for the production of sinks contains 18% chrome, which is responsible for high chemical strength and 10% nickel, which adds elasticity. This composition results in a pretty, elegant and durable color. Stainless steel is easy to clean, repels bacteria from the surface. The antiseptic coating guarantees a high level of hygiene and is easy to clean.

## Dedicated cleaning agent, safe for cleaned surfaces

The use of dedicated agents means that the surfaces do not deteriorate and remain smooth for long, facilitating daily cleaning. A specially selected composition removes the most common dirt extremely effectively. On the other hand, the preparations are mild for a given type of surface (metal, granite, ceramics and others), without entering into chemical reactions with them. The preparations are biodegradable and thus safe for the environment. With Deante cleaning products, keeping things in order will be extremely easy!
