

Varnish for mineral render ATLAS CERMIT WN color 02 Pine 4 I

Brand	ATLAS
Manufacturer	
Weight	4.10 kg
Product Code	BTID-0002-04
EAN	5905400250305
SKU	003466
Advice IBB	
IBB ID	13324

Product specification

Manufacturer	ATLAS	Unit	pack
Brand	atlas	EAN	5905400250305
Coverage	approx. 0.1-0.15 kg/1 m ² /coat	Relative air humidity during application and curing	< 80%
Density of the finished product	ca 1.9 g/cm ³	pH	8

ATLAS BEJCA varnish for wood imitation render CERMIT WN color 02 PINE 4 I

Most important features

high weather resistance
high resistance to soiling
rich colours palette of natural wood
possibility of obtaining an aged wood effect

Description

ATLAS BEJCA is designed for making a thin, coloured protective coating on ATLAS CER-MIT WN decorative render, imitating the texture of natural wood - the product is part of thermal insulation systems.

Can also be used on concrete substrates, all types of mineral renders (smooth, textured, etc.), gypsum render and putty, gypsum plasterboard, etc.

The main properties

ATLAS BEJCA is produced on the basis of a mixture of low-molecular polymer dispersions and silicone resins.

Flexibility of the coating and high weather resistance - ensured by high polymer dispersion content.

Strong hydrophobicity, high resistance to dirt - the addition of special silicone resins allows a significant reduction in the absorbency of the coating and reduces the adhesion of dust and dirt, especially in the cavities of the render.

Durable and stable colours - specially selected semi-transparent pigments with high UV resistance, supplemented with small additions of inorganic pigments, ensure colour stability for years.

Available in 10 natural wood colours - colours designed according to the preferences of users from different European countries.

The main parameters

Drying time: approx. 30 minutes

Early resistance to rain: after approx. 24 h

Average consumption: approx. 0.1-0.15 kg/1 m²/coat.
