

Adhesive for polystyrene boards and mineral wool

SEMPRE TU-300 white 25kg

Manufacturer	
Country of manufacture	Poland
Weight	25.00 kg
Product Code	TU-300
EAN	5908249172586
SKU	003481
Advice IBB	
Application	for polystyrene boards and mineral wool, embedding the mesh without the need for priming
IBB ID	13339

Product specification

Manufacturer	SEMPRE	Unit	bag
Colour	white	EAN	5908249172586
Country of manufacture	Poland	Coverage	4 kg/m2
Warranty	12 months		

Adhesive and reinforcing mortar for polystyrene boards and mineral wool for embedding the mesh without the need for priming SEMRE TU-300 white 25kg

The TESOROMONT UNIVERSAL TU-300 adhesive mortar is used to create a mesh-reinforced layer and for gluing white and graphite polystyrene boards and mineral wool as part of a seamless insulation system for external walls of buildings without existing insulation (SEMPRE TERM ST and SEMPER TERM WM) and secured with the system.

It is suitable for both newly constructed buildings and those undergoing thermal modernization.

Boards glued with mortar require additional fastening with mechanical connectors, i.e. expansion pins.

It has high resistance to weather conditions.

Contains reinforcing fibers.

After drying, it does not require priming before applying paint or thin-layer plaster.

Features:

very good adhesion to mineral substrates and mineral wool

highly vapor permeable

easy to use

flexible

resistant to weather conditions

contains reinforcing fibers
reinforced with polymers
waterproof
