

Professional plastering unit AGREKOM 60L

Manufacturer	
Dimension	36x80cm
Weight	50.00 kg
EAN	5903672755184
SKU	003725
Application	For spraying masses, e.g. thin-layer plasters, spray wallpapers, adhesives for mesh, plaster, paints
IBB ID	13582

Product specification

Manufacturer	AGREKOM	Unit	set
EAN	5903672755184	Dimension	36x80cm
Capacity	90-120kg masy	For use	professional
Material of exhaust	stainless steel	Diameter of filler hole	21cm
Hose length	5m	Reach of passing material - max	15m
Tank capacity [L]	60	Dimensions of the tank with wheels	36x80cm
Possibility to block wheels	YES	Diameter of wheels	19cm
Maximum working pressure	8		

Professional plastering unit AGREKOM 60L

DESCRIPTION

The unit is designed for the spraying of most materials that are used in construction. The device comes with a 60-litre tank and two guns designed for spraying masses of different density.

The plaster gun works perfectly with dense masses such as structural plasters, liquid wallpapers, mesh glues, and gypsum plaster finishes. The paint gun is designed for substances that are less dense, such as emulsion paint, wood protection products, priming agents (substances such as primer contact ought to be sprayed with a plaster gun).

The tank of the plaster spray unit can fit a load of around 90 - 120 kg of material. That makes it possible to work for longer periods of time without the need to take any unnecessary breaks. The tank is equipped with a wide filler, an outlet with a wider diameter, a strong chassis on wheels and a precise pressure regulator.

APPLICATION

•Spray plastering (facade, structural, silicone, mineral, silicate, SiSi, and acrylic plasters)

- Spray application of glue onto mesh when conducting insulation work
- Spray application of hydroinsulation
- Priming walls
- Plastering
- Spray painting
- Impregnation
- Spraying of fire retardants
- Applying liquid wallpaper
