

Quick drying ATLAS ultragrunt priming emulsion for critical surfaces 5kg

Brand	ATLAS
Manufacturer	
Weight	5.00 kg
Product Code	ULTRAGRUNT-05
SKU	003879
IBB ID	8942

Product specification

Manufacturer	ATLAS	Unit	pack
Brand	atlas	Relative air humidity during application and curing	< 80%
pH	8		

ATLAS ULTRAGRUNT is a ready-to-use mass produced on the basis of polymer resins with the addition of selected quartz aggregate.

Characterized by excellent adhesion to non - absorbent substrates and to substrates with a very smooth surface - for a concrete substrate the adhesion is at least 1.0 MPa
the addition of selected quartz aggregate increases the adhesion of the applied layers - by developing an effective surface between the substrate and the material being placed.

Creates a rough surface for the application of the next layer intended for applications at elevated temperatures - recommended for use in the range from 5 °C to 35 °C, indoors and outdoors is a quick-drying preparation - applying another layer after 4 hours.
