### Fibre Tape Wykamol 115mm x 25m

Wykamol Fibre Tape is used to join waterproof plaster membranes together, and enable direct plaster or dot-and-dab application on top.

Wykamol Fibre Tape is used to join together plaster mesh membranes which you can then plaster directly onto or apply a dot and dab plaster board. The fibre tape creates a strong bond between the membrane and the plaster application, and prevents the membrane from moving and therefore stops any cracking of plaster on these joints.

#### Special features:

- Allows for plaster application on top
- Allows for dot-and-dab plaster board on top
- Holds membrane joints in place
- Prevents cracking of plaster due to membrane movement
