Stonesil impregnation for concrete products 5L

The main purpose of using impregnating agents is to create a layer of protection against weather conditions, such as rain, snow or solar radiation. The use of impregnants allows you to keep impregnated surfaces clean and prevent efflorescence from occurring.

Properties

Prevents the formation of fungi and lichens. Creates a protective layer with excellent resistance to weather conditions. It revives the natural colors of materials. Reduces the tendency of mineral substrates to get dirty.

Application

It is intended for impregnation of mineral substrates such as: concrete, mineral plasters, fiber-cement boards, lime-sand walls, brick walls, aerated concrete, natural and synthetic stone cladding on a mineral basis, paving stones.

Applying

After shaking, the contents of the package are ready to be applied to the surface with a brush or spray device.

Wear

Depending on the type of surface: from 8 – 10 m²/L

Frost resistance: yes

Application: indoors, outdoors
