### Product description

- Substrates repairs indoors and outdoors – enables filling gaps and cavities as well as leveling other substrate irregularities.
- Execution of bonded screeds.
- Enables quick start of successive operations – in standard conditions tiling just after approx. 5 hours (for layers 5 mm thick).
- Reduces the consumption of adhesive mortars, plasters, screeds and floors.
- Plastic consistency – working parameters ensure easy application and filling gaps in the repaired surface.
- High mechanical strength – compressive strength min. 20.0 MPa, flexural strength min. 4.0 MPa.
- Reinforced with polypropylene fibres which:
  - reduce cracking resulting from shrinkage during the mortar setting,
  - enable application of thicker mortar layers on vertical surfaces, with no slip effect,
  - ensure uniform water distribution during drying.
- No shrinkage cracks.
- Wide range of layer thickness – from 3 up to 30 mm in a single operation – one may extend the layer thickness up to 60 mm after mixing the mortar with quartz sand (grain size up to 2 mm) in 1:4 weight ratio (quartz sand : dry mortar) - recommended when filling gaps and leveling horizontal surfaces.
