

# Plasterboard adhesive ATLAS BONDER+ 25kg

Brand	ATLAS
Manufacturer	
Country of manufacture	Poland
Weight	25.00 kg
Product Code	AT-BONDER-PLUS-ZAC H-25
EAN	5905400587883
SKU	8765
Advice IBB	
Application	For gluing plasterboards and installing stucco
IBB ID	8765

## Product specification

Manufacturer	ATLAS	Unit	bag
Brand	atlas	EAN	5905400587883
Country of manufacture	Poland	Coverage	2.5-5.0 kg of glue / 1 m2 - gluing boards
Relative air humidity during application and curing	< 80%	Density of the finished product	ca 1.9 g/cm3
		pH	8

## ATLAS BONDER+ 25 kg adhesive for plasterboards

### Most important features

very good adhesion to the substrate and to the plasterboard surface  
 strong bonding of the plasterboard to the substrate  
 fibre-reinforced – for high stability of the bonded boards  
 suitable for bonding plaster blocks and plaster stucco  
 high plasticity for easy application

### Product description

Gluing of plasterboard - finishing of interior walls during renovations or in new buildings.

Application of decorative stucco.

Bonding of rigid composite panels for thermal and sound insulation.

Filling of defects up to 30 mm deep in mineral substrates.

Suitable for the following substrates: Brick, block and perforated brick walls and other similar walls made of ceramic or silicate

material; gypsum, concrete and aerated concrete surfaces.

**Main properties**

Contains fibres to improve the stability of the bonded panel - especially with thick layers of adhesive.

High plasticity - the adhesive is easy to apply, changes shape when the board is positioned and pressed against it, and adapts to the irregularities of the substrate.

Optimum correction time for freshly glued panels – up to 20 minutes - allows easy application of the adhesive and enough time for positioning and correcting the boards.

High strength - ensures a permanent and strong bond of the plasterboard to the substrate.

Low shrinkage after setting -there are no internal cracks or deformations in the adhesive layer, so the bond is highly stable immediately after setting.

ATLAS BONDER is a dry mix based on synthetic gypsum, mineral fillers and modifying additives.
