IBB ID	10944

Product specification

Manufacturer	COMENSAL	Unit	pcs
Brand	comensal bravo		

COMENSAL Stainless interior corner trowel 60x100mm

Two-component elastomer handle.

The smoothly finished, two-component handle fits well in the hand. It is comfortable, durable and aesthetic. Its shape was designed for a specific grip in which the hand is placed when working with a trowel. The index finger supports the tool at the height of the handle with the carboy.

For comfort and stabilization, the overmolding in this place has been extended and profiled in a special way. The elastomer from which the overmolding was made is characterized by high resistance to abrasion and extreme temperatures.

To the touch it resembles a pleasant, smooth but blunt rubber: it holds stably and does not slip, it gives a sense of comfort and control over the tool without the need for a constant strong clamp.

The hole allows you to hang the product in the workshop and keep things tidy

working part:

The trowel is connected to the handle with a steel ridge. Its optimal length and angle affect the comfort of work.

The metal walls are arranged at an angle of 90 degrees to each other, thus obtaining precise external right angles.

The steel used to produce the trowel is resistant to corrosion, which eliminates the risk of staining the smoothed surface with rust.

Rounded corners do not scratch the surface when shaping an angle. Work runs smoothly, without downtime.

Wall height: 60mm

Length: 100mm
