IBB ID	**18418**

Product specification

A preparation designed for the impregnation of facades made of mineral plasters, natural stone, clinker, concrete, or other absorbent mineral materials. It provides the surface with hydrophobic properties, preventing moisture from penetrating micro-cracks and pores, thereby protecting the impregnated surfaces from damage caused by freezing water. The product creates a protective coating on the surface that facilitates cleaning. The coating does not create a gloss effect and does not change the color of the impregnated surface. It limits the formation of efflorescence, moss, and lichens. The product is eco-friendly, as it does not contain benzine or solvents.
