Country of manufacture	Poland		

Ready mixed filler CEKOL F-16 20 kg

CEKOL F-16 is a ready-to-use putty, suitable for wet troweling. It is light to sand when using the traditional processing method. Recommended for manual application: with a trowel, roller and mechanically with the use of appropriate aggregates. After drying, you can paint with all types of paints.

Cekol F-16 finish plaster can be used indoors in dry rooms, on concrete and plaster substrates, plasterboard panels, seasoned traditional cement-lime plasters, as well as acrylic paint coats with high surface adhesiveness.
