

Clip on PVC profile with mesh for base track 2.5m

Manufacturer	
Country of manufacture	Poland
Weight	0.25 kg
Product Code	PNCS2.5
SKU	000773
IBB ID	10172

Product specification

Manufacturer	PROFIGIPS	Unit	pcs
Country of manufacture	Poland		

The PVC clip on drip ledge with mesh ensures proper drainage of water flowing down the vertical surfaces of the facade, protects against leakage and thus eliminates the risk of plaster deterioration and falling off. Protects the edge against mechanical damage.

properties:

- prevents the plaster from falling off the starter profile at the junction of the starter profile and the plaster
- provides an easy, quick and precise method of finishing the lower part of the insulating facade
- resistant to weather conditions, aging and UV radiation
- strengthens and facilitates obtaining even edges of protruding facade elements

installation:

The pvc profile should be pushed onto the edge of the installed aluminum or PVC starter profile.

The drip edge bead has a 10 cm wide reinforcing mesh made of fiberglass, on which the adhesive mortar should be applied, and then you can start applying the reinforced layer over the entire surface of the facade. After applying the plaster, the nose of the drip edge is invisible.
