Brand	comensal bravo	EAN	5902060002367
Dimension	270x130mm	Handle	elastomer
Thickness [mm]	0.6		

Smooth trowel made of high quality stainless steel for spreading plaster and plaster - dimensions 270x130 mm - elastomer handle

The high-quality stainless steel trowel for putty and plaster by COMENSAL from the professional BRAVO line was created with the user's comfort and work efficiency in mind. The solutions, raw materials and technologies used in its production translate into a noticeable comfort of work and a sense of efficiency and precision of the effect achieved. Mortars spread smoothly and the hand remains significantly relieved even after many hours of use. The excellent quality of the tool is noticeable throughout its use, which is why it is one of the most frequently chosen products from the professional COMENSAL BRAVO line. COMENSAL BRAVO trowel for plaster and plaster - tested and recommended in the construction community.

Handle:

Ergonomic handle, large and comfortable, profiled in such a way as to relieve the hand as much as possible during long hours of work. To the touch, it resembles a pleasant, smooth but dull rubber: it does not slip out of the hand, gives a sense of comfort and "control" over the tool without the need for a constant strong grip. It is permanently and stably connected to the base with an aluminum foot. Made of elastomer, it is characterized by high resistance to abrasion and extreme temperatures.

Working part:

The working part (270 x 130 mm) is made of high-quality stainless steel containing a special complex of alloying elements such as nickel, nitrogen, manganese and others. Thanks to this, it is highly resistant to corrosion and chemical environment. The smooth working surface ensures the desired effect of a perfectly smooth surface even with difficult mortars. The thickness of the trowel is 0.6 mm, which increases its resistance to deformation and makes it durable.

Adjusting the tool to your needs:

The COMENSAL BRAVO portfolio includes steel trowels in all types needed during renovation and construction works. In addition to smooth floats, there are toothed floats of various sizes and shapes of teeth. For the installation of large tiles and in the case of curved surfaces, it is recommended to use floats with large teeth and half-round teeth, and for mosaic tiles with small teeth. For lovers of natural solutions, we offer trowels with profiled wooden handles, both smooth and toothed, available at other auctions.

Quality:

The tool was made of the highest quality raw materials from proven suppliers, using modern technology that increases resistance to unfavorable working conditions. They are easy to clean by washing off with water the remains of plaster and plaster that have not dried on. It is thought out in terms of comfort and usability. It is characterized by extraordinary durability and aesthetics. Resistant to corrosion, chemical environment, abrasion and even minor mechanical damage.
