

Sanitary silicone ATLAS SILTON S 018 pastel beige 280ml

Brand	ATLAS
Manufacturer	
Weight	0.35 kg
Product Code	SILTON-S-018-N2
EAN	5905400277210
SKU	5302
Advice IBB	
IBB ID	5302

Product specification

Manufacturer	ATLAS	Unit	pcs
Brand	atlas	Colour	pastel beige 018
EAN	5905400277210	Relative air humidity during application and curing	< 80%
Density of the finished product	ca 1.9 g/cm3	pH	8

ATLAS SILTON S 018 pastel beige 280ml

COLOURED SANITARY SILICONE FOR GROUTING CERAMIC TILES AND SEALING
FOR INDOOR AND OUTDOOR USE

USE

ATLAS SILTON S is designed for grouting ceramic tiles, especially in corners, between wall and floor, and at expansion joints. It may be also used to fill gaps at sanitary devices e.g. bathtubs, shower bases and sinks, as well as kitchen furniture, air-ducts and pipes of sanitary and heating systems. ATLAS SILTON S is particularly suitable for sanitary rooms e.g. bathrooms, shower cabins, WCs, kitchens, laundries and other rooms of increased humidity. It is characterised by very good adhesion to common non-absorptive building materials such as ceramic tiles (glazed tiles, terracotta, gres tiles, clinker), glass, and china, faience and enamelled elements. ATLAS SILTON S can be also used on surfaces covered with strongly adhering paint layers and on metal surfaces with anticorrosion protection; however, this type of use (as well as in case of other non typical surfaces) requires an adhesion test. Do not use this silicone for mending fish tanks, mirrors, and on any surfaces that may have direct contact with food or potable water. ATLAS SILTON S with ATLAS GROUT and ATLAS EDGE TRIMS are a set of products used for professional finish of various tiles. It is suitable for indoor and outdoor use.

PROPERTIES

ATLAS SILTON S is a high-quality sealer based on silicone elastomer. Owing to specially matched additives, it is resistant to

fungi and mould. In reaction with moisture of air, it forms a durable, elastic and water-proof seal layer. Its resistance to UV rays, ageing and effect of cleaning agents ensures lasting colour and outstanding look of joints. ATLAS SILTON S maintains its properties in a wide range of temperatures: from -40°C to +180°C. A wide range of colours (40 colours) corresponding with colours of ATLAS GROUT (2÷6 mm) makes it easier to match the appropriate silicone with adhesive and tile colour. ATLAS SILTON S is frost- and water-proof.
