Concrete mixer BWA-110

The BWA-110 230V free fall concrete mixer is known as the best-selling concrete mixer in the class of small concrete mixers. Thanks to the total capacity of 160 liters (110l working capacity), it will be perfect for renovation and minor construction works.

Although it may look inconspicuous at first glance, the Besel motor (1100 W) powered by the Polish production, together with the rim and cast iron gear, is able to provide many years of efficient operation. A solid steel structure weighing 105 kilograms guarantees stable operation on any surface under full load.

The use of the worm wheel in the drum tilt adjustment mechanism ensures smooth unloading of the ready mortar onto the wheelbarrow. Thanks to its small dimensions, it is also easy to transport and store. As a manufacturer of concrete mixers, we provide this model with a 3-year warranty as standard.

To sum up: the Agro-Wikt BWA-110 concrete mixer combines the best features of a modern concrete mixer, thanks to which it fully deserves the name of a professional tool for small renovation and construction companies. You can buy it only in the best construction warehouses.
