

Low pressure expanding foam PVC 750ml

Brand	BORAMAX
Manufacturer	
Country of manufacture	Poland
Weight	0.80 kg
Product Code	PCV PPU-1
EAN	5901738720046
SKU	000381
Advice IBB	
Application	It seals, dampens, insulates and glues very well
IBB ID	8713

Product specification

Manufacturer	BORAMAX	Unit	pcs
Brand	boramax	EAN	5901738720046
Country of manufacture	Poland		

Boramax low pressure expanding PVC foam - professional

One-component polyurethane foam.

The product has a new generation formula, which gives it very good adhesion to PVC profiles.

Low-pressure PVC foam is a foam that expands only until the gap is completely filled, without exerting strong pressure on the mounted frames and profiles, which prevents them from warping and deforming.

Designed for installation of PVC, wooden and aluminum joinery, window sills, stairs, bathtubs and shower trays.

The exceptionally dense and durable sealing foam has a low-pressure formula, is characterized by high bonding strength, seals, insulates and glues very well.

The product also has very good sound and heat-insulating properties and hardens quickly, which shortens installation time.

It is also available in a WINTER version, in which its specially modified formula allows operation at low ambient temperatures down to -10°C.

PROPERTIES

Resistant to fungi and mold

High performance

It seals, dampens, insulates and glues very well

Does not distort profiles

Short initial hardening time

APPLICATION

Sealing and mounting doors and windows,

Insulation and embedding of pipes, insulation, thermal insulation of roofs and flat roofs,

Sealing construction spaces, partition walls,

The product has very good adhesion properties to most building materials such as PVC profiles, wood, wood-based materials, brick, concrete, plaster and metal.
